

Product Information

TJM TYPE 13 OUTBACK NEW TOYOTA 200 SERIES

AVAILABLE MID DECEMBER

The TJM Type 13 Outback steel bar is the best protection that money can buy and will be available for the new Toyota 200 Series in Mid December 2007.

This engineer designed Type 13 Outback Steel Bull Bar will house a wide range of recovery winches in its standard winch frame (up to a TJM Ox 10,000lb or Warn 9.5xp) and can accommodate large driving lights across the center section mid-tube.

Mid tube pipes across the headlight loops also add extra strength and protection to the exposed areas in the event of an animal strike. In addition, TJM's unique 'T-Slot' Recovery Jack Points are available on this bar making it even more versatile.

As you would expect from a TJM bar, this bar doesn't come short on other features either. Durable Polycarbonate park/indicator light assemblies limit the chance of breakage when struck, Steel Kato Straps brace the upper structure of the bar adding strength to this large bar and thicker steel is used to construct the tough centre channel compared to that used by competitors.

TJM Bull Bars are air bag compatible, do not void your new vehicle warranty and should have no effect on your insurance policy.

DESCRIPTION:

TYPE 13 OUTBACK STEEL BULL BAR
TOYOTA LANDCRUISER 200 SERIES

PART NO:

070SO13N82A
